Unraveling the Story of Type II Diabetes and Its Implications on Bone Health: A Translational Approach
Brenda J. Smith, Ph.D.
John & Sue Taylor Professor, NSCI, OSU

Friday, Dec. 13th, 12:15-1:15
OSU Center for Health Sciences
Room D107, 1111 West 17th Street, Tulsa
Simulcast to ITLE 143 in Stillwater; Light lunch in Tulsa

At the conclusion of this seminar participants will be able to:
- Understand why osteoporotic-like fractures are now considered a major complication of type 2 diabetes.
- Describe how a translational research approach provides novel insights into the pathophysiology of complex disease states.
- Consider the social and economic impact of a major health event such as hip fracture and the implications for future research.
